

**IAA Severo Ochoa Meeting: Addressing Key Astrophysical
Questions from Granada**
18th-21st October 2022

Lidia Tasca

Laboratoire d'Astrophysique de Marseille, France

**“Cosmic history of galaxies, growth and environment: the Key role of
Spectroscopic Surveys”**

In the past twenty years, spectroscopic redshift surveys have largely contributed to increase our knowledge on the formation and evolution of galaxies. I will go through the main observational results obtained by different spectroscopic projects which helped to shed light on the interplay among the physical processes responsible of the galaxy mass assembly.
